

NEW Program coming: DTD Reduction

The current DTD program is great.

It gives you 5 possible digits for the 1st, 2nd, and 3rd positions.

However.....

What if there was a program that would allow you to pick the exact digits you wanted for the 1st, 2nd, and 3rd positions?

That would cut down your playlist significantly.

And many times it's obvious that **at least one digit** can be removed for the next few drawings.

For example, let's assume that the last 10 numbers that hit are 079 089 127 128 129 136 137 138 139 145. These numbers would give you the DTD reference box below. Let's also assume that **593** hit next.

DTD Reference Box/Playlist

10 Numbers used: 079 089 127 128 129 136 137 138 139 145

DTD Reference Box

5 7 6

4 2 1

0 8 3

8 9 9

7 3 2

Notice that 5 is the top digit in the first position: **593**. (It does not matter if 593 hit box or straight.)

What does this mean?

This means that you should be expecting digits from the bottom **four** positions to hit next for the first position:

DTD Reference Box

5 7 6

4 2 1

0 8 3

8 9 9

7 3 2

Therefore, when we enter the last 10 numbers in the DTD program (**593**, 079 089 127 128 129 136 137 138 139), we should expect that one of the bottom four digits from the first position to hit.

See below: we can eliminate the top one (**6**) since that position hit last. So that means that a **5xx**, **0xx**, **8xx**, or **7xx** will hit (box or straight).

DTD Reference Box/Playlist

10 Numbers used: **593** 079 089 127 128 129 136 137 138 139

DTD Reference Box

6 7 4

5 2 1

0 8 3

8 9 9

7 3 2

If you are a bit brave, you can just focus on the bottom three: 0, 8, and 7:

DTD Reference Box

6 7 4

5 2 1

0 8 3

8 9 9

7 3 2

The same applies for the second and third positions.

So if **071** hit from the box below (box or straight), you should expect one of the lower position digits to hit next (2-8-9-3) for the **second** position (again, it can be box or straight): 2-8-9-3.

DTD Reference Box

5 **7** 6

4 2 **1**

0 8 3

8 9 9

7 3 2

Same thing if a digit from the bottom position hits.

If 48**2** hits from the DTD box below, expect a digit from the top four levels to hit in the third position in the next 2 or 3 drawings (6-1-3-9).

DTD Reference Box

5 7 6

4 2 1

0 8 3

8 9 9

7 3 **2**

The new program that I have in mind will allow you to pick the exact digits you want from each position so you can reduce the DTD playlist.

However, the program will be generic; you can use it to generate the playlist for ANY sets of digits you enter for the 1st, 2nd, and 3rd positions!

I am not completely sure how this program will look like once its up – but it looks very promising!

I will keep you updated on the progress I am making in setting up this new program.
