

The Rundown Strategy

How to Reduce 80 Numbers Down to 20-10 Numbers

I want to show you an INCREDIBLE Strategy.

For this you will need to enter the last 80 numbers that hit your state into the Rundown list program

Research Programs

> 4-WAY REPORT

> 10-WAY REPORT

> **THE RUNDOWN LIST**

> ALPHA CODING SYSTEM

For example, below are the 80 numbers for New York starting from the **578** that hit last night (Thursday December 8). Since 578 is the most recent number, it is first on the list. As you can see, the program gives you 80 singles. These are the 80 most due singles in New York as of last night.

I have said this before and I will say it again: these 80 numbers HIT right away starting the following day. Do not be surprised if the next 4 singles that hit your state are on the list. The problem is that this list is TOO big: 80 numbers is way too many numbers to play.

The Rundown List (80)

However, I just found a way to reduce this list.

First, copy the list into the **Visual Digit Distribution** Program.

We have reduced 80 number down to just 20 numbers.

That is a big accomplishment.

But we can do even better.

Go to the **Basic Box** program and enter the last 10 numbers.
In this particular example it's the 10 numbers in yellow below.
