The Final Solution

The 7 Day Coding System

It seems as if every system I write about in a Kindle is soon replaced by something that is even BETTER.

I recently put up a new Kindle explaining a 10 Straight Number System. You can see it here: https://www.amazon.com/dp/B079DH666K

Guess what?

I found something better. This NEW and IMPROVED straight number system may be **The Final Solution** to the Pick 3 riddle because it solves the two biggest problems in the Pick 3 game; (1) Too many numbers to play and (2) Not having a specific time frame of when the numbers are supposed to hit. This system solves these two problems by only giving you TWO numbers to play and giving you a 7 day time window for those two numbers to hit. I call this time window Containment.

Containment is defined as the action of keeping something under control or within limits. The limit that we are interested in the Pick 3 game is one concerning TIME. Specifically, we want to know when we should START playing a set of numbers and when we should STOP playing those numbers. In the Pick 3 game we have to know WHEN a set of numbers is going to hit and we need this time window to be short.

Question: What is the problem with due pairs?

Answer: You have no idea WHEN the due pairs will hit; so you play the due pairs "blind" because there is no Containment; you do not know when is the cut-off point (when you should stop playing them). This new system solves this problem once and for all. This system gives you TWO numbers that will hit within 7 DAYS. That is why I call it the **7 Day Coding System.**

Question: What is the problem with my 10 Straight Number System?
https://www.amazon.com/dp/B079DH666K

Answer: The Containment or time window is TOO LONG (8 weeks). That is way too long a time period to be playing a set of numbers - and they may NOT hit during those 8 weeks!

This new system is designed to give you numbers that will hit within 7 days. This can be 7 drawings or 14 drawings. Or it can be 21 drawings (Georgia) or 24 drawings (Texas). Specifically, this system will give you 2 (TWO) box numbers that will hit in the next 7 days (Sunday to Saturday). These two numbers can be converted into **12 straight numbers.**

Only playing two numbers is excellent. This means 14 drawings in a 2-draw per day state, which means that if the numbers are played $1 box at 5dimes (payout is **$150**), it will be $28 spent per week. This means that you have 5 WEEKS to show a profit because $28 X 5 = **$140** (the two numbers change every week; you do not play the same 2 numbers for 5 weeks). Same thing if the numbers are played straight. That's 12 straight numbers per week or $6 per day (if played for 0.25 cents) or $42 per week, which is **$210** spent in 5 weeks - but the payout is **$225.**

VERY IMPORTANT: These numbers (which are based on a special coding system) already have a track record of hitting at least ONCE or TWICE per week in the last 12 to 15 weeks; so going for 5 weeks without a hit is unlikely. In other words, there is an excellent chance that you will get a hit in the 1st or 2nd week of playing (definitely the 3rd week) - and again, you are only playing TWO NUMBERS (or 12 straight numbers if you are going for a straight hit).

I am so confident in this system that my 12 straight numbers for New York are in play right now at 5dimes. This means that I should be getting a straight hit this week (Sun Feb 4 to Sat Feb 10) or next week (Sun Feb 11 to Sat Feb 17). I will post a picture of my straight hit right after I get it.

Insofar as the coding system; this requires a special Excel sheet where you code the last 12 to 15 weeks in a very specific way (you code one week at a time). You then collect the codes, enter these codes into the **Group Matching System** program to identify the TWO hottest codes (the codes are number based so the hottest codes can be easily identified). These two hot codes will tell you the two numbers to play the following week.

Basically, I will be giving away here my BIGGEST **SECRET:** *coding numbers based on fixed reference point. Many of my programs have been based on this coding system. This is how you find order in randomness; identifying a fixed reference point and then identifying or coding numbers that follow based on this fixed reference point.*

SECRET: *The fixed reference point is the digit distribution of a predetermined amount of numbers (20, 30, 40, 50, 60, etc.). I will explain this in more detail in my explanation of the 7 Day Coding System Kindle.*

I will NOT be turning this system into a program. I have done that in the past and what I learned is that the program is super hot the first few weeks and them becomes cold one or two months later (the program stops giving you winning numbers) because the codes that the program is based on are outdated. In other words, **the code-based programs will only give you winning numbers if the codes are always being updated.**

What I learned is that you have to stay on top of the codes of your state and update them on a regular basis. I can not do this for all the states. Therefore, what I will do is teach you how to do it on your own. It will be up to you to update your codes every week and always be aware of what are the two hottest codes in your state in the last 12 to 15 weeks.

I know that all of this sounds complicated to you right now - but I will write it all up and explain it in detail. You will have to have access to Excel. I will be sending out the Excel sheet you will need for the coding. You have to understand what an "absolute reference" is to use this system. You may want to take a look at some of these videos on Youtube: http://alturl.com/4qbw5

Here is what I am going to do: I will write a Kindle that explains the coding system. You will then have to email me the code at the end of the Kindle to get the Excel sheet where you will do the coding.

I will start working on this Kindle THIS WEEK!
