

# Correction on Pair 79

(I made a mistake)

I made a mistake on the last report I sent out that I want to correct right now. I will start out by comparing two outputs. Look at the next page. What you see here is the output from the Group Matching System program using all the codes I currently have: 39 weeks worth of codes;  $14 \times 39 = 546$ . As you can see, these are the top 9 codes. The index of these codes is very high; its 69 ( $10 + 9 + 8 + 42 = 69$ ). That is how many times these 9 codes hit during the 39 weeks; so they are hitting about 1.76 times per week (69 divided by 39 weeks).

10-Way Match: **168** (1)

9-Way Match: **179** (1)

8-Way Match: **289** (1)

7-Way Match: **014 018 124 356 568 679** (6)

Now look at the next page.

Here you see the same 546 codes entered into the Pair Frequency Finder program and still, pair 79 is the hottest pair in New York. It hit a total of 44 times during the 39 weeks, so one of the 10 numbers from this pair is hitting about 1.12 times per week (44 divided by 39).

#### Pair Times Percentage

 016 114 556 499 568 179 048 013 178 288 167 368 002 578 139 789 369 138

### Pair Times Percentage

**79** **44** 2.961  
 18 40 2.692  
 01 39 2.624  
 56 39 2.624  
 29 38 2.557  
 19 37 2.49

The index for the 9 hot codes (69) is much bigger than the index for pair 79 (44). Also, there are only 9 codes; this will give you just 9 numbers to play - which is better than playing the 10 numbers you have to play for pair 79.

**So obviously, playing the numbers that correspond to the 9 hot codes is better than playing pair 79, right?**

**WRONG!**

It makes **complete sense** and sounds **completely logical** to play the 9 hot codes instead of the 10 numbers for pair 79 – but that is not the case. I came to this conclusion by back testing the hot codes and noticing that even though the index is VERY HIGH (69), there are several weeks when NONE of the “super hot” codes hit. For example, none of the 9 codes hit during the week of June 2 in New York.

3	4	7		347			12					
4	5	7		457			13					
2	7	8		278			14					

What really made me come to the conclusion that pair 79 is better than playing hot codes is the INCREDIBLE consistency that they hit with; week after week after week. I have said this before and I will prove it again at the end of this report. I have two key questions at this point: **Why is pair 79 better than a group of hot codes?** (the hot pair in your state is most likely another pair; you would need the last 400 to 500 codes to find out).

And also...

**WHY does this pair hit with such incredible consistency?**

Pair 79 **unifies** and **consolidates** 10 numbers in the Pick 3 game. This makes these 10 numbers act as a single unit; **this unification makes these 10 numbers stronger than any other set of hot codes** – even if those hot codes have a higher index than pair 79 (or whatever is the hottest pair in your state). So pair 79 is like a **unified** and highly trained military unit. Every soldier in this fighting unit is a TEAM player and he is in the unit for the LONG term.

A set of hot codes, on the other hand, is like a group of **mercenaries** (soldiers who are paid to fight; their heart is not in it; they are just in it for the money). These paid soldiers are highly **individualistic** (they each do their own thing). Every soldier in this unit has his own individual agenda and is only a “team player” for the short term.

So basically the 10 numbers that correspond to the hottest pair in a particular state is unified by a common theme or **unification point** (the pair), thereby making the unit (the 10 numbers) highly likely to hit WEEK after WEEK. Luckily, only 1 hit per week is needed to show a profit if the 10 numbers are played (box or straight) at 5dimes.

The hottest codes, however, do NOT have a common theme or anything to “keep them together” week to week; each code is free to do their own thing (like a paid mercenary soldier).

**Next I will show, once again, what I have said before about pair 79 (the same should hold true for whatever is the hottest pair in your state); assuming the index is higher than the base (number of weeks used), after missing a week, the hottest pair will hit once or TWICE the following week.**

Pair 79 did not hit New York last week (July 29 to Aug 4).  
The numbers 856 and 734 hit on Saturday July 28. The  
pair corresponding to pair 79 in New York was 36.
